1)

Adrite a program to insert and delete an element at the 11th and 12th position in a linked list where n and k is taken from User.

```
Soli Hinclude astdioins
     # include < stdlib.h>
     Struct mode
      Struct node * moset;
     Struct node * curr *+cmp;
     void input (struct nodes)
     void delete (struct modes)
     void main (void)
      Struct mode *s;
      int n;
      S= Null;
      20
       printt ("Enter the element to insert; \n:");
      printf("2. Delete\n");
      Printf ("3. Extr \n");
      prints ("-Enter your choice:");
      scanf ("0/0d", 9, n);
        Switch (17)
         lase is input(s);
                 break;
         Casez: delete(s);
                break;
         4 cotile (n1=3)
```

```
Void input (struct mode + z)
 int poss c=1
 curr = Z;
 printf ("Enter the element to be inserted;");
 Scan + ("% od", & pos);
    while (curr -) mext 1 = Null)
     C++;
     it (c==pos)
     temp=(struct node *) malloc(size of (struct not)
      printf ("Enter the numbers:");
      Scanf ("% d", & temp -) n);
      temp - neset = curr - mext;
       curr - next = temp;
       break;
Void delete (struct mode + z)
Pint pos, c=1;
 curr= 2;
 print+ ("Enter the element to be delete:");
Scanf ("0/0 d", & pos);
 while (curr -) nest & = Null)
 C+ +;
 Sf (c = = pos)
temp= current - neset;
Curr - mest = curr - mest - mest;
```

```
dree (temp)
  (urr = curr ) mext;
 void merge (struct node * p, struct node * q)
 struct mode + p_curr=p, +q_curr=+q;
 Struct mode * p_ment, * q-nent;
 while (P_curr = Null 2 & q-curr = Null)
  P_mest = p_curr -) mext;
 9-next = 9-curr -> mext;
  9 - curr -) mext = P-mext;
 P- curr -) next = q-curr;
 P- curr = P-next;
 9-curr = 9-next;

    output: - mead data:
              10 20 30 40 50
              head alternate:
                10 30 50
    (i) How
             array is different from the linked
     list.
    (ii) write a program to add the first element
     of one list to another list of example we
     have {1,2,39 in list i and {4,5,63 in list 2
     we have to get {4,1,2,3} as output for
     list 1 and {5,6} for list 2.
Soli- (ITThe major difference blw Array and linked
     lists regards to their structure, Arrays are
     Index based data structure where each
    clement associated with an index on the
    other hand, linked list relies on reference
     to the previous and meset element
```

```
(11)
